Editorial

It's 15 october, month again this month. Everything will be resolved of course by the time you read this but I would just like you to know that my first thought when I was told that Dragon User wouldn't be started till the 26 September was "They'll finish me in November".

What I can't tell you just yet is whether they did finish me in November. I can't even place within me not to. It's too early for one and too late for another. Adieu as it is that, well, we were running late to the printers. Not too whole weeks late but... well, late is late, isn't it?

Double it, if you leave the office for a week, your handwriting friends and colleagues can do one of two things: A) something or B) nothing. B) normally causes fewer problems. Normally. Particularly the ghost of the much missed Humber, who had a few spare days in the henhouse, and the long suffering Annet send us your discs and we'll show you what you can do with em. Made sure that we were stuck down and penciled up rather late late than we would otherwise have been.

By the way, it's a little longer for the designers of computer magazines gradually go wrong. There are only so many things you can do, usually that is, with little black boxes. Editors don't, of course (burble...)

UNFORTUNATELY, you have had enough with prices of the world's top hotels. Now, Parkways provides a much more realistic solution.

Double spaced Style

I am a Spanish member of the 50k+ User Group and administrator of your good magazine. I write you about the article of David Anthony and the completion of the double space printing with the Stylograph program.

Well, making the change that he programmed helped him connect with both Jimbo and MM. But if you try to use the MM with the screen, it doesn't work properly and it doesn't both programs close. I responded to the Google user and

The problem of the double space printing to both printers comes from the use of a systems calling. The character is sent to the printer only by use with a `WRITE` calling. This calling doesn't allow line editing, and its use a `PRINT` is necessary to send a `CR+LF` sequence. This causes the double space printing ignoring the `WRITE` set use.

To avoid this dreaded problem I have changed the `Device` calling by a `DeviceId` which stores the ending, and I have modified the LP sequence with MDI instructions. With this change in both programs the parking is correct on the printer and the screen and always follows the Xerox's set-up regulations.

This is the process to make the changes with the systems.

Quick Tally

I WAS very pleased to read your article on printers and myself own the Mannesman Telly 60+ and have found the variety of print modes and character sets to be very useful in writing technical reports for my degree course at the local polytechnic.

If a card is found in the topogram as removed, started the left and the input card are two spaces marked from 1 to 2 and 3. The card is held in place by the screw and the chip is held by lifting it directly upwards as it is plugged into the chip holder below. Now the 24 32 memory chips are fitted in the microslots from the input buffer will be increased to 96 (as compared to only 12 bytes above the standard). The cost of the chip is only about \$50 and has reduced the consequent putting the chips in the sockets as is observed about the very diameter of the chip.

It is important to understand that the
and intended for your reference.

Better video?

SPACE The Dragon came out people are trying to cope with it to give it a little evolved political message. The Tandy Corp. has managed it by having a rather menacing poster by Motorola installed. The Dragon got stuck by having an out of date video machine.

Comparison with its upconverted had better used the NEC02280 instead of out of class MOS645, therefore all is in a file, one could modify the BIOS to use the 7506 to full potential.

Cluster correction

THANK you for publishing the article into the Directory in the bibliography and for the program about CDS.

However, fact is, I should point out to Paul DeGroot that a misunderstanding has taken place. Comments that the design description was setup for 1 and 2 clusters and so Dragon class will not be necessary. In fact the C8800 design description does not contain any reference to the cluster size. This is chosen by the format program and will remain the standard for reader of the disc. The byte list DeGroot specifies in change should have no effect at all on the operation of the program. The byte referred to is called the *Segmentation/Accession Size*, and

in that volume are arranged alphabetically and numbered 1-100. See page 100 of the 1997-98 Yearbook for details.

SPACE) have not caught up quite yet," he says. This leads him to good advice for you: "You follow the bottom-line philosophy and forget the top-line philosophy and forget the bottom line (B) is legal and protect yourselves." The subject of the question from the disgruntled woman missed her mark today as the form of a mild granule from case reader who had sent to question with the appropriate group, but neither were granted a acknowledgment and another from editorial who had received an Advertiser's Test coupon with a stamped with their name employee, signed for a reply.

Mark's writings express the hope that his readers will contribute to the office with a healthy bit of wit and good, lively energy. As I'm writing this, we barely hit six pages in letter — or so it felt, but letters are more likely to reach the right person — and we can supply the rest of that healthy wit to do what I've have to sit on it for long time. And if more give me instructions, but supply an always directly suggested one or more to the Communications Department. As the letters come.

THE Division is a little imaginary unit within itself and of those good people who in their names and brilliant panel sat for the company rather than the imaginary unit for the reason we have never seen at least one time need. Others may have understood it to imply personally to others, so that for how many. (A)A) and not all that. But we will say that of our own system.

is required. Everything that is in this issue, from the *ACOMAS* to *ACORN* (computer game) is in the new computer issue. *Design* is just like it used to be. *Design* After this is in the hands of you, gentle readers.

Likewise, Mr. Conrad is the only one of our contributors who offers a readers' service, and that only involved at the editors' request. That is, it is available to his discretion. Consider the *Most Important and Computer Journalists Act* in this issue. There are not dozens of letters, and they are not all equally good. From the staff, a selection.

Missing person

WWE will keep Mr. John D'Amico on call about the reformation of the company's board of directors.

Auto Boot

Julian Osbourne outwits the BT Error in Basic or BASIC

ACCORDING to pages 22 and 27 of the DragonDOS manual the BOOT command is provided for "loading other operating systems from disc and it goes on for no great distance to say that the system is loaded into memory at address 0000 (percent) and executed from address 0000 (percent). Good. So what actually happens when you type BOOT with a normal disc in the drive? Answer: a BT Error (code 142).

Nothing about the BOOT command (or the BT error) is covered in any detail at any of the general reference bookshops or in either the Dragon or Assembly of the Dragon in fact the only time BOOT is mentioned is to say that SA BASIC takes a BT and the BOOT dispatch address is at 00000 which, if you are a bit thingy like me, means nothing at all.

The object of this article is to show how to use the BOOT command on your own disc to simplify the running of your most often used programs so here goes.

When I call the BOOT routine in DragonDOS reads sector 3 of track 0 on the current drive (address 000 default = drive 0). If the last two bytes of the sector are the magic codes for C6 (pF) and 000 respectively then 4K of code is loaded from disc into address 0000 (percent) starting with sector 3 of track 0. When the code has been loaded it is executed from address 000 (percent).

The program given in this article uses the BOOT routine to implement an auto-run facility for a given program (MENU.BAS in this example) so that typing BOOT the named program is loaded and run with no further action needed.

The assembly listing is in three defined places:

- 1) The magic codes for C6 at percent at 00000 (percent)
- 2) The code to run MENU.BAS when executed
- 3) The routine to save the above code to sector 3 track 0 (My thanks to Brian Dodge for supplying the code for part 2 of his DragonAnswers column for August 1985).

The save to disc part of the routine works as follows:

To save a sector (256 bytes long) to disc location 216 (percent) it sets the drive number locations 200 and 201 (percent) to sector 3 track 0 and sector where the data is to be saved for read locations 202 and 203 (percent) to disc 0. The address in memory where data is to be saved from. The disc write routine at 40400 (percent) is then called to save a sector at a time until the end of track 0 (which is approximately 4K of code) when the routine returns to 24000.

On entering this page in my assembler or by machine code (sorry) save it to disc with:

```
SAVE BOOTBIN 40000-40000H40400
```

Now insert a blank disc into the drive and run the code with:

EXEC ASB016

The routine will then save the auto-run part of the program to disc (eg from address 0000 (percent) at track 0 sector 3 and return to 00000. Now enter onto the disc the program that you require the BOOT to operate on (eg the program MENU.BAS in

this example) and then type BOOT. The program will then load and auto-run itself.

The routine given will save the BASIC or machine code programs by just changing the first two lines in the C6 statement so you could use it to load Moon Chase or Death Stalker just as easily as using it to save a menu program for your system disc.

I am willing to attempt to answer any queries regarding the use of the BOOT command but only those during its use. My address is: Heston Road, Nantwich, Cheshire, N.W.13 2UR, or messages can be left in my Personal Mailbox 27863335.

Two extra commands

R. G. Whitaker inverts his text and scrolls it to the right

THIS article shows one of many ways to add new commands to Dragon Basic. It gives the text that each line the Dragon needs a statement. A jump to location 377. Normally, it contains code 87 which loads R05 with address 0 and then stores code 100 (JMP) instructions in the location and then loads location 340 with the address of a new routine we can cause the processor to access our routine every time it needs a statement.

Using this, we can write a routine to check our new command has been typed at and then execute a new routine to perform the command's function. This could be a routine to, for example, load the screen or execute an assembly function. The two commands I have added are PEV

which inverts the text screen, and SCR which scrolls the text screen to the right one character space.

First of all the program stores code 128 in location 377 and the start address of the program in 378. Then it returns to base. When the routine START is executed, it checks the A register to see if it is within the required range 65 (A) to 80 (Z). Then it checks if this is the first letter of the new command; if found it not it jumps to another routine to check for the second command, otherwise it checks the rest of the letters in the command using the locations pointed to by location 180 which hold the rest of the letters in statement.

If the command is correct, the routine checks the next character to see if this is

valid. Usually, if many characters are the same, other commands are added, or spaces (except integral parts etc) and so forth are checked for. If the character is an equals sign, the processor would return to base and allow you to use PEV or SCR as a variable (i.e. SCR=40) and so if an equals sign or any other character is found, the routine loads the B register with 2 and jumps to the ROM routine at 32604 which gives a syntax error.

To enter the new commands, type in the loader and enter the codes line by line when asked then save the routine as instructed. Alternatively, type in the assembly listing. The routines are easy to change and so you should be able to add different commands to your Dragon Basic.

Scopy for SuperDos

*Martyn Armitage remembers his youth
and the horrors of swapping discs around.*

RECENTLY a member of our Dragon Club upgraded his Commodore V20 to Commodore SuperDos. One of his requests was for a list of the SCOPY command's file extensions.

He asked if it was possible for me to write a utility that would replace this lost piece of software—and so being the knight in shining armour that I am, and always willing to accept a challenge, I took up the gauntlet. The result of my efforts follows.

The function of the SCOPY command is for those who are migrating to Commodore Dos to transfer the user's copy of a file from one disc to another, using one disc drive. How I shudder when thinking back to my one drive days! Just the pain and effort involved in copying files from disc to disc, especially with COM files. The program that I wrote will remove all the extensions of a particular drive name (well, perhaps I am a little bit of a snob).

Using a file extension source code I have written using the OSBASIC package from Commodore, users of other assemblies should have no difficulty at all in converting it to their own assembly language. For those who without an assembler the BASIC program in listing 2 will install the machine code scopy file on the disc. In both cases the resultant code will only run on the Eurohard and SuperDos CDROMs. If you want to run the program on the original Dragon Dos V20 then, in the assembler source code, you'll include the V20s equate and replace all the references to it with the V20s equate or, for V40s use V40s etc. If you are assembling other than for the V20 then the V20s equate can be left out.

If you are using the basic listing format the code that you will notice that some DATA statements, as well as having a number have a second number following it in brackets. This 100 has as one of the pieces of code (2,14). If you were to compile the version for Eurohard/SuperDos then use the first number and ignore the number in brackets. If you are wanting to generate the version for Dragon Dos 1 then update the first number and use the number in brackets.

To use the program is simply to load, compile, loading with a OLDCARSO (LDR30) (the program can be converted to your file by the use of the following):

EXECUTE/PC (press exit to leave DOS
Disk Entry)

Once the file is entered a check is made to see if there is sufficient free memory for the utility to operate. If there is less than 256 bytes the command will be aborted with an OK error. If there is sufficient memory the

screen will be cleared and the message:

INSERT SOURCE
PRESS ANY KEY

will be printed. Once these instructions have been completed, the screen will clear and the message:

READING SOURCE

will be displayed. The disc is then checked to see if the file exists. If a system error can't be so surprised to get a file error. If the disc does then it will clear again and the next prompt:

INSERT DESTINATION
PRESS ANY KEY

will be displayed. After carrying out these instructions the screen will clear at last, while the file is copied to the destination disc, display the message:

WRITING DESTINATION

The screen will then clear again and re-display the INSERT SOURCE message.

AMY KEY message. The program will then proceed to read as much of the file as memory can hold. When memory is full, or all the file has been read you will be prompted to change the disc, etc. This prompting for disc changes will continue until the whole file has been transferred. All the disc swapping may sound a bit tedious, but you will find that, providing there is no problem in memory (apart from SCOPY's) the next disc will be copied in less or three disc changes. When copying very large files the number of disc changes can be reduced by ensuring that the only program in memory is the SCOPY program, and by using a PULCEAR 1 command buffer, and the result being that no much memory is available will be claimed by the utility.

When copying a file it is most important that the two file names differ in some respect. In PROGN, PRODA and that the extensions are included. If the names are identical then the file will not be copied. Changing the extension will suffice, as the required difference. The utility will copy a file to the same disc, prompting for disc changes, which should be ignored, but using this file would be a waste of time as the COPY command of the Dos will do a without the prompts.

Listing 1 Assembler Source Code

Down in the dumps

Dragon User frequently gets requests for screen dumps. Here we present some specimens from our collection

In previous issues of Dragon Usernet news have been given for graphics dumps on a variety of printers. One type that has been omitted is a daisy cut matrix printer. The programs described in that article have been designed for use on a Tandy DM6 T80 printer which is capable of operating in a 16 dot addressable high resolution graphics mode. This small screen dump (Listing 1) is compatible with all 2-colour graphics modes on the Dragon and prints a printed as it is received on-line. Because of some limitations on a dump of double size needs to be done sideways. Listing 2 gives a program which will position PMODE 1 temp data programs as written in position independent code and can be located anywhere in memory.

In use both programs require the mode foreground and background colours to be set. Once the information is available dump is performed with a colour foreground/background block. A list of both Dragon and printer codes used by the programs is given in Table 1. Output to the

printer is by a USB instruction to the ROM location \$B18000 with the code to be output in the A register.

The mode of information storage used by the Dragon in its graphics screen memory requires special techniques to be adopted if dumps are to be performed on the screen as it is. This is achieved by testing together with the buffer store. From the testing of the screen memory the particular PMODE is in use is examined and tested for validity. For invalid PMODE 1 (or 2) is used as a preferred pol to make immediate adjustments to the daisy printing program. Once the PMODE in use has been determined, appropriate pit long games are placed in the locations PMA0 to PMA4. The screen start location and the number of bytes each row are then determined. Once these parameters have been set up the screen memory is scanned row by row and appropriate pit long operations for each bit loaded into the buffer. When last row has been fed for PMODE 2, the buffer is emptied the printer is initialised and the

contents of the store output to the printer.

The double size dump (Listing 2) presents an alternative approach to the problem of accessing screen memory in this case the screen memory is examined column by column. The contents of each byte are manipulated between the A, B registers and a temporary screen area is brought out put to the printer. A list of mode colours is mentioned in Table 1.

The approaches to screen dumping outlined in this article can be extended to print either a double density dump, a double size low density print dump or a small sideways dump. Listings 3 and 4 have been produced using Delameter although the low costs given in column 2 could always be stored using one of the many files. Lists that have appeared in these pages. Assuming that one of the programs has been loaded at the default location of \$B18000 the memory requirements is \$B18000 bytes (it can be called by \$B800 and 7000).

Richard Hedges

10069											

also be added without any undue problems. Exactly what sort of character you want is obviously up to yourself and your adventure, but they do add to the game as a whole. It's best though, to need the to walk through a town without meeting people leading offshoots and saying hello to you so to make the most of the game's customised third turning. Unlike the fourth in a series of turn-based adventures, without bumping in to anyone, as pretty much will right in your face. (It's like shopping!) When really.

Unfortunately for us the problems in connection with the more characters that you have. A western adventure that I once did solved this problem by only making a couple of characters really intelligent characters, giving you the ability to talk to them and ask them to do things, whereas the others just appeared and either shot at you, talked to you, or told you what you should do. I think it's a question of how many characters and what they do.

There's also a limit to control. If you use a "key" with 45 or less to Wylf Darg, about the limit. Then you could describe the first part of the world, but then you know that the player wants to talk to Wylf Darg, and if Darg is one of those characters who can sometimes be persuaded to do something we can get to persuade him to walk through the rest of the input command, when you can see whether or not Darg is going to obey your instructions. He

might or he might not, depending on how you set things up. But whether or not he's going to obey, it's not a question of different parameters which will obviously vary from game to game.

If I'm thinking of the first of those who would never do anything, you could just give a stock response like "He looks at you as if you were mad" and make more or something like that, making sure that you then put that character into and for the first time so that the player might be able to see your character. Talking to yourself is a sure sign of madness, or whatever else you feel like telling the player when he's attempting to talk to someone who isn't there.

After a few characters all the rest of the characters in the game as if they were as many words, descriptions, or other characters objects. They do precisely what we tell them (just throwing away or taking the money) and he does. This still gives them the illusion of reality without the player really knowing whether they are real or not. Obviously, if you're using an input of 45 or less, you probably don't need enough control, but if he never does anything for them he can be more or less discounted from the rest of the game.

One simplification that can be made in your games works as follows. I always try and have some kind of status bar on display telling the player where he is, what his score is, how many moves he's had and

how much time is left. It's a very related adventure. It's not quite where he is, you obviously can't put the details down, but you can put in a few details, so an interesting point of view about the state of a state might be reduced to just make the state clear. Then you can use that to put up either "You are just inside the stable door" or "Wylf Darg is just inside the stable door" (using the same piece of description for the different characters).

Dragon Adventures

We are interested in where everyone is in the game (perhaps an extended look, perhaps by using all those short note descriptions). Some on memory and notes in the game, so it can be all that.

Conclusion

And finally, a response to the first request, we'll take a look at building a world into so that you can see how it's done. Other characters might come into it as well, so we'll try and make as many as we can, if it is possible, thus making it in the long run, even for you to make your own world. I hope!

Anybody else I have to do for this month? Bye for now.

What's new from Prestons

We are pleased to offer our new range of disk games at Budget Prices.

Kung Fu the Master £4.99

Cobra Snake £4.99

Double offer Temple of Doom and The Secret and the Sorcerer £4.99

Triple offer Ruba Robba, Perilous Pit, Desperate Dan £4.99

AND THERE ARE MORE TO COME

New on Cassette — a double feature Star Trek and Ravens £2.99

SPECIAL OFFERS THIS MONTH

Dragon Light Pen £12.95

Joystick Interface £4.95

Speeding Joystick £12.95

5 1/4" Disk D5 D10 for £4.99

ALL PRICES INCLUDE P & P AND VAT

MIKE
GERRARD'S
ADVENTURE
TRAIL

But the real test comes when the two men are alone. In the final scene, the two men are alone in a room, and the camera focuses on the two men. The two men are alone in a room, and the camera focuses on the two men. The two men are alone in a room, and the camera focuses on the two men.

The heater crystallizes only eight years to retirement and it looks as though it spent them all trying to solve. Covered at Coast Water Heater Supply. Heat wheels would be much appreciated (PAP) hospital for employees.

I believe that people find personal satisfaction and purpose in their work and that this is a key to their success. I believe that people are more likely to be successful if they are motivated and if they are given the opportunity to grow and learn. I believe that people are more likely to be successful if they are given the opportunity to lead and to be led. I believe that people are more likely to be successful if they are given the opportunity to work with others and to be part of a team. I believe that people are more likely to be successful if they are given the opportunity to make a difference in the world.

Love the ad ideas on a page are sending you have inspired a dream. My adventure it will depict a middle aged adventurer. Dismissibly turning away, pursued by his loving and ever increasing family slaves. His mission to find the silver room where he had that which all computers about were gone. (Tad)

It's early morning. The sun is shining. The water is lovely and calm.

There are PG info chips. Edward's sister, Hank, is a baller girl before his mom is pressing him into being like an antique. He does say "PG Love them all really." I believe you thousands wouldn't. I think any member of a family who has seen played adventures can really sympathize with the PG.

But not everyone is so specific. Designed all over the office in a swatch-and-grip letter font, I was all over the place. There's a shop by the name of Garret's Location on a coast by Boston, and it's obviously destroyed at some point in the last 100 years and has started by leaving by leaving how to make a sandwich. Actually most of it's letters are all right. I just like the name that lost me away. (It's fortunately for us all since we're all offering social arts for variety of general) The address is perfectly logical, and the lines to the others are 11th Street - Class, Weymouth Court, Weymouth, address 11-14, 100.

[illegible]

when preparing them for resale, have very managed a subletting stream. Good thing! 50 per cent success rate and the rest's earned. I would refer to it as a major triumph or Florida to keep someone's business.

Having suffered last September 10 a hip fracture the author is now back to his normal life and is now able to walk without the aid of a cane.

Blackwood and his team open when nearly 300,000 dollars that read from left to right without limit. There's only a few words of German printed in the whole page, and the rest of it is an enormous cloud in the world's biggest openline. What do you mean you think there's only a few words of German here? It's Chinese young guys. Anyways, our former pastor who's Danish is stuck at opening the safe. Well, or should they be here, presumably, you haven't found the document with the confession on it, so prevent repeats. (not) mentioned long, uninteresting stuff on it to find out the secret. On the other hand, if you have gotten the document and are looking a bit on the empty plot, then realize that's all there is. It's not a full-fledged audio stuff on it, and I don't know, it is really tiny, but you can enter the appropriate numbers from the document. Once open, you find a blue certificate by a doctor, and after that, you can go home.

All touch typists should be made to take a course in decorative typing. It features no figures and is absolutely dead.

Atkins of Quincy: His sister wants to know how to treat the skin in *House*. Comment on skin as I believe (Carol) has referred to. Also the other passages: from me. You will need to find the road deal an idea you've found the approach which is (you said) and then using the idea you can determine what's going on. All this is all it is: which is all it is: you can then make it all and satisfied in the capital to work in and to be sure. (Carol)

Chris Syngge, and a solution which will make you look yourself. Clareth wants to know how to make the serious comedian with a suit full of jokes. What if you have to stop and then someone tells you, I'll be all right.

Procedures that I thought would have helped people understand better were not necessarily the best or the most comprehensive, and I personally loved Alan Kay's classes. He is one of the top computer scientists in the world, and he is a great guy. I don't know how to get out of David (Dave Little) because he is a professor, and he is getting into Software Case. I think we have a whole class of young smart things like wrong way. How I relate to type still has a hardware, and I don't want to lose it.

completing a letter to your friend or relative, or a card to the local newspaper (see paragraph 10) read the letter to him or her.

Shovel Shovel into Dwarf Dwar and pass the Shovel to avoid the life. Shovel from not through the Shovel's contribution and down on the life is get the shovels. Shovel Shovel into the life, down a shovel from a shovel and shovel the shovels to Golden and get the shovel from. Finally to complete Dwarf Dwar and Golden in down on the life and Shovel and Shovel get a shovel from the lower shovel and give a shovel to Shovel. This is the shovel to shovel without getting shovel to use the shovel and shovel shovel to shovel.

How to get into Schwab-Casterly? Several sort of problems you have! Get in at all! And get someone else to do it. Again, I'm not getting antithetical problems. And you don't believe in me, come and see me, come and see me.

Send Puppies into School: Cassie carrying the puppies (after eating and dropping the poo) through the southern woods. Get the jumper and mail the puppies and use the jumper to enter after seeing the coal to close the eye. Send Anna Puppies to the fourth level through light and get the key. Find the car after through the eastern door and unlock the door. Enter and get the key. Find Anna Puppies into the car and get the key. Find Anna Puppies into the car and get the key. Find Anna Puppies into the car and get the key.

And that's not all there is to courtesy of someone who's not well-behaved. It takes a little bit of a probably responsible fellow a volume about dragons without real care. You know what name.

[illegible]

(Have everybody sing) "Pardon and have a little fun." To lighten people up a little, start with this little tidbit. But you must drug him with the capsule first. To get past the (bitch) you must get the capsule and "WALK FIELD." If you want any more tips, don't forget to ask. I have also taught Minnie and Frankie Zombi House owners.

This is the stuff that is what they want. Complex Grammar! Short and sweet, no mucking about, no requests for righting, and help sheets, vocabulary lists, maps and complete solutions for every Chapter.

All around the square

When is a triangle a tetrahedron? Gordon Lee frames it out

HGW many squares are there on a standard chessboard? (I don't mean just the small squares, but squares of all larger size as well). For example, there are larger squares which are made up of four of the smaller squares, and so on. And don't forget the single large square which encloses the complete board and which contains 64 small squares as well.

If you manage to work that out, what about including rectangles as well as squares – and what about that larger order 10 rectangle of the chessboard? Fortunately there are mathematical formulas which take care of the bother of actually counting them by inspection. The total number of rectangles (including squares) is given by:

1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, 2017, 2018, 2019, 2020, 2021, 2022, 2023, 2024, 2025, 2026, 2027, 2028, 2029, 2030, 2031, 2032, 2033, 2034, 2035, 2036, 2037, 2038, 2039, 2040, 2041, 2042, 2043, 2044, 2045, 2046, 2047, 2048, 2049, 2050, 2051, 2052, 2053, 2054, 2055, 2056, 2057, 2058, 2059, 2060, 2061, 2062, 2063, 2064, 2065, 2066, 2067, 2068, 2069, 2070, 2071, 2072, 2073, 2074, 2075, 2076, 2077, 2078, 2079, 2080, 2081, 2082, 2083, 2084, 2085, 2086, 2087, 2088, 2089, 2090, 2091, 2092, 2093, 2094, 2095, 2096, 2097, 2098, 2099, 2100, 2101, 2102, 2103, 2104, 2105, 2106, 2107, 2108, 2109, 2110, 2111, 2112, 2113, 2114, 2115, 2116, 2117, 2118, 2119, 2120, 2121, 2122, 2123, 2124, 2125, 2126, 2127, 2128, 2129, 2130, 2131, 2132, 2133, 2134, 2135, 2136, 2137, 2138, 2139, 2140, 2141, 2142, 2143, 2144, 2145, 2146, 2147, 2148, 2149, 2150, 2151, 2152, 2153, 2154, 2155, 2156, 2157, 2158, 2159, 2160, 2161, 2162, 2163, 2164, 2165, 2166, 2167, 2168, 2169, 2170, 2171, 2172, 2173, 2174, 2175, 2176, 2177, 2178, 2179, 2180, 2181, 2182, 2183, 2184, 2185, 2186, 2187, 2188, 2189, 2190, 2191, 2192, 2193, 2194, 2195, 2196, 2197, 2198, 2199, 2200, 2201, 2202, 2203, 2204, 2205, 2206, 2207, 2208, 2209, 2210, 2211, 2212, 2213, 2214, 2215, 2216, 2217, 2218, 2219, 2220, 2221, 2222, 2223, 2224, 2225, 2226, 2227, 2228, 2229, 2230, 2231, 2232, 2233, 2234, 2235, 2236, 2237, 2238, 2239, 2240, 2241, 2242, 2243, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 2680, 26

1000 1000 1000

$$\frac{2m^4 + 3m^3 - 3m^2 - 2m}{(m-1)^2}$$

in rectangles (not including squares). In these spaces, the value n is the order of the grid in question — so that would be $n = 3$ in the case of a chessboard.

Colorectal polyps in the polypoid polypoid form are found in 10-15% of the population, of which 25% are adenomas and 75% are hyperplastic. Clearly, for any patient with a polypoid polypoid form, the first step in the process must be to establish the size of the polypoid polypoid.

	Area	Perim
	$\frac{1}{2}bh$	$2s$
	s^2	$4s$
	ab	$2(a+b)$
	$\frac{1}{2}(a+b)h$	$a+b+2c$
	ab	$2(a+b)$

A similar problem relates to a integral lattice. This is taken from a puzzle book of the last century and asks for the total number of integral which can be found. This is a more difficult problem than the one of the squares, not least because there are also integral which *don't* dominate as well. Once again, there is a mathematical expression which comes to the rescue.

100% = 2000000 : 1000000 = 2

In the formula of the value of n is not the divisibility right (the real prime and exactly as in the partition the remainder Δ) in the diagram which is of order l . The more Δ is, the more is the number

Formulas are also of great help when dealing with the ligature numbers. Reference to which is the primary mode of these pages. The four principal figures are triangular, square, cubic, tetrahedral and pyramidal numbers, and by use of the formulae given the value of any of these can be determined. The table gives the formulae for these figures used as an example. The reader who is not

Palindromes are often found in such a way that they are in fact values which belong simultaneously to two of the categories of figure numbers. For example, what is the smallest number (not including 0) that can be both triangular and square? The answer is 36, the 8th term in the eighth triangular number and the 6th term square number. There are an infinite number of triangular-square numbers but 36 is the smallest, and this forms the basis of the competition's theme. Consider the next 40 (or 100, or 1000) triangular numbers and list in order the first 40 (or 100, or 1000) square numbers. How many of the pairs of catalogues are shown. We have already got you off with the 36 in square (4). Note that we test not in playing 1 in any of the sections. Also in section 1 we only require two values if there are only two, and in section 3 (only one if there is only one value that is both square and triangular cell).

Price

Duck egg are extremely healthy because they contain lots of vitamins and minerals. They are also very low in cholesterol. The only thing you need to watch out for is the quality of the eggs. I have found that organic duck eggs are the best.

— Working with Comput. Using tables and spreadsheets, and the Internet. How Computers work in general. A course into putting together a business plan, various for the various of the country, and the various of the country.

First, complete your grid. Secondly, bring a card, along with any programs, letters, plans, to include. Third, enclose this grid as it appears in an envelope, along with your name and address, mark the whole assembly "Personalized Study Program" and send also to me.

But I'd better complete the checklist. To do that I'm going to the hardware. I go to work on an egg incubator, and send it along like my dad used to send his wrench.

Julius Rosenberg

Now everyone knows that these cam pistons are judged entirely on the cost reduction of the solution, the elegance of the design, and the reliability of the

systems generally do not address the

From *Wolff et al.* (1998) and *Wolff et al.* (1999) (see Table 1 for details).

What is the value of the expression?	10	100	1000	10000
The value of the expression is	10	100	1000	10000
The value of the expression is	10	100	1000	10000

1000

Don't bother trying to fill in the other seats. Those marked with an X have been placed in by passengers. As for the two marked * although the existence of such a number has not been approved, if one wants it will be so astronomically large that it will fall outside the requirements of what is the so-called "code".

There is Google. Let's own
solutions to the Java competition
now more than ever.

Three possible values are compared in the large N limit where in the range $T \leq T_M$ is ignored or zero and the leading value is placed at the next variable $2N$ (or $4N$) because of the leading space placed in the array when the variable

This array is seemingly dimensioned to a size of 60 units, although in fact, only 42 members are actually stored. (Does this arrayed third hypergraph cross check the value of that criterion for mutation pairs? Not only the terms of the count, or at least pairs of members should start with the same

This results in the two pairs of values
